## SUSTAINABLES

ORGANIC COTTON

### ORGANIC COTTON

Cotton generally enjoys a positive image but its production process does not exactly gain any plaudits from an environmental aspect. Indeed, conventional cultivation methods utilize large quantities of water and wide amounts of artificial fertilizers like pesticides and poisonous chemicals. This in order to protect the crops from insects and diseases and to allow the plant to grow quickly, to the detriment of nature. (ground, groundwater and air)

To overpass these drawbacks, alternative exists. It is named organic cotton. Its production method is more eco-friendly, using no pesticides, preventing the waste of water and implementing a "soil management" in order to preserve the ground from defertilization. Also, replacing conventional cotton by organic one gives the chance to small farmers to sell more easily their productions. All the benefits of conventional cotton such as softness, comfort and hypoallergenic are remaining. However, this new process requires more time, a lower yield and therefore higher costs.

### HEMP

Hemp is a natural fiber that grows extremely fast and good. Indeed, hemp can produce 250% more fiber than cotton using the same amount of land. It has the advantage to keep the soil healthy, even after decade of culture and to require few amount of water, energy and chemicals to grow. Hemp provides all the softness of a natural fiber and presents also the advantage to be more durable and stronger than any other one. Therefore, a garment made of hemp will better retain its shape and this, for longer. Due to the porous nature of its fibers, hemp is more water absorbent, making the wearer feels cooler during warm days. Hemp is also naturally resistant to mold and ultraviolet light.

### BAMBOO

Bamboo fabric has a natural sheen and softness that feels and drapes like silk but is less expensive and more durable. Because of the smooth and round structure of its fibers, bamboo clothing is soft and non-irritating, even to sensitive skin.

Bamboo is naturally anti-bacterial and anti-fungal supposedly because of a bacteriostatic agent unique to bamboo plants called "bamboo kun" which also helps bamboo resist harboring odors. The bamboo kun in bamboo fabric stops odor-producing bacteria from growing and spreading in the bamboo cloth allowing bamboo clothing to be more hygienic and to remain fresher smelling. Bamboo clothing is hypoallergenic. Bamboo is highly absorbent and wicks water away from the body 3 to 4 times faster than cotton. In warm, humid and sweaty weather, bamboo clothing helps keep the wearer drier, cooler and more comfortable and doesn't stick to the skin.

Bamboo the plant and also bamboo the fabric can rate high as an environmentally friendly and renewable resource: Bamboo grows rapidly and naturally without any pesticides, herbicides or fertilizers.

Bamboo clothing (both mechanically and chemically manufactured) is 100% biodegradable and can be completely decomposed in the soil by micro-organisms and sunlight without decomposing into any pollutants such as methane gas which is commonly produced as a by-product of decomposition in landfills and dumps. Growing bamboo improves soil quality and helps rebuild eroded soil. The extensive root system of bamboo holds soil together, prevents soil erosion, and retains water in the watershed. Bamboo grows naturally without the need for agricultural tending and large diesel exhaust-spewing tractors to plant seeds and cultivate the soil. Bamboo plantations are large factories for photosynthesis which reduces greenhouse gases. Bamboo plants absorb about 5 times the amount of carbon dioxide (a primary greenhouse gas) and produces about 35% more oxygen than an equivalent stand of trees.

### RECYCLED POLYESTER

Polyester is a synthetic fiber made from oil and commonly used in sports textiles for its capacities to move moisture away, to dry quickly and to resist to abrasion. About 65 to 70 percent of global polyester production is used for textiles, whereas the rest of it serves usually to create plastic bottles and other products packaging. Today, the technology allows us to use recycled polyester to make garments. Indeed, PET like bottles for example is collected (from recycling bins), washed, flaked and dried. It is then melted, re-extruded and spun to create threads ready to be weaved or knitted in order to create new garments. It was found that this recycle process can save up from 30 to 50 percent of the total energy needed to create PET.

Recycled PET's yarns keep the same qualities and characteristics and they can be used alone or mix together with other fibers to create wide ranges of textiles.

The dyeing process is one of the most polluting stages of production, and thus has a huge negative impact on the earth. It is a long succession of steps that requires large amounts of chemicals, water and energy.

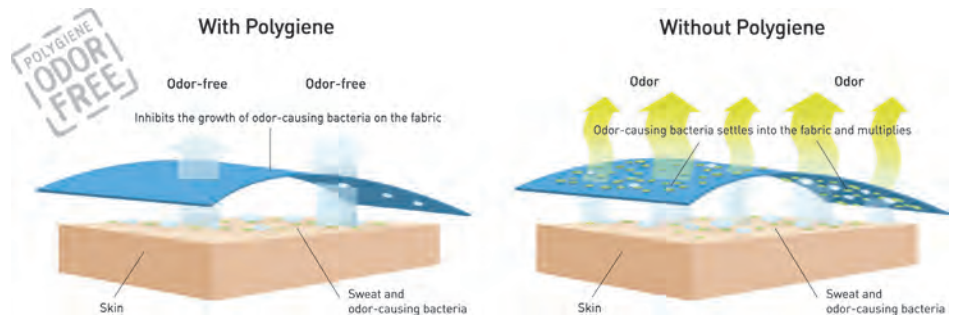

Ecoya® was introduced in 2007 as an effort to become more environmentally sustainable and as an alternative to classic dyeing process. Indeed, with Ecoya®, polymer and natural pigments are melted together. This mélange is then melted again and spun into Ecoya® yarn. The result being to produce Ecoya® fabrics saving chemicals, water and energy. Also, unlike yarn or piece dyed fabrics where the dye is only on the surface, Ecoya® yarn is colored inside and out. In other words, the yarn is already colored prior to extrusion so even the interior of the fiber is colored. This is the reason behind its superior colorfastness to light, water and washing.

The Ecoya® concept: "water for living, not for dyeing".

**BIONIC FINISH ECO**

Inspired by nature, BIONIC-FINISH® ECO is an ecological hydrophobic finishing. Applied on fabrics, this fluorine-free recipe allows a very good repellency of water and aqueous substances.

Usually, durable hydrophobic finishes are based on fluorocarbon resins. This chemical is not degradable in the environment and is well-known for the damages it causes on plants and animals. Thanks to the nature of its molecules, BIONIC-FINISH® ECO is now our clean and effective alternative to fluorocarbon to make textiles hydrophobic. Our laboratory and field tests showed us that this finishing is suitable enough as valid alternative to the usual DWR treatment.

**What are the benefits of Polygiene®?**

Polygiene® inhibits the growth of microorganisms such as bacteria and fungi that cause odor.

Your garments, footwear and gear will:

- Stay Fresh – Polygiene® inhibits the growth of odor-causing bacteria. Odor develops when bacteria settles into the fabric, mixes with sweat and multiplies.
- Hygienic – Less bacteria and fungi in footwear, wetsuits and gear helps reduce tinea infections, such as athlete's foot.
- Environmentally friendly - Polygiene®-treated clothing can be worn for longer periods of time before laundering is required. Therefore less energy, less water and less detergent are used. When traveling or hiking, you can pack less clothing and travel light with less luggage.
- Longer lifetime – Prolongs garment, footwear and gear lifetime by eliminating the bacteria that break down synthetic fibers.
- Polygiene® treatment is guaranteed to last the lifetime of the garment, footwear or gear.

**FAIR WEAR FOUNDATION**

Fair Wear Foundation (FWF) is an independent, non-profit organisation that works with companies and factories to improve labour conditions for garment workers.

All members must sign the 8-point FWF Code of Labour Practices, which is based on UN and ILO principles. Each year FWF reports publicly on members' progress towards implementation of the code in their supply chains.

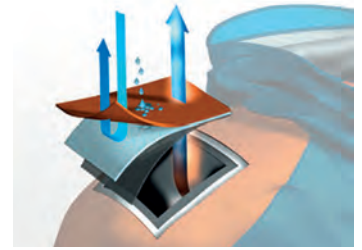

SALEWA is a member of the FWF and works actively towards fair and healthy labor conditions in the factories where our textile products are produced.

FWF is active in 15 production countries in Asia, Europe and Africa.

**THE BLUESIGN® SYSTEM – MANAGING INPUTS. RESPONSIBLE ACTIONS.**

The bluesign® system focuses on chemicals and their impact on resources, people and the environment. With its holistic approach based on Input Stream Management in the textile production, the bluesign® system aims at reducing the negative impact that chemicals may have on people and on the environment, ensuring a responsible use of resources and guaranteeing the highest level of consumer safety. The textile industry's most stringent criteria and monitoring of on-site implementation, it encourages companies along the entire textile value chain to improve their sustainability performance.

On the tables below, under "bluesign® certified" and marked with a check (✓), you can find the fabrics in the collection which are made according to the bluesign® standard.

## GORE-TEX<sup>®</sup> Pro

Garments engineered with GORE-TEX<sup>®</sup> Pro product technology are built for maximised ruggedness and are ideal for extreme and extended use. All components are built for maximised ruggedness while strict textile performance specifications ensure optimum strength. All GORE-TEX<sup>®</sup> Pro garments must pass Gore's toughest test conditions and most aggressive rainstorm test.

- Durably waterproof and windproof
- Extremely rugged and durable materials
- Extremely breathable

## GORE-TEX<sup>®</sup> Active

Garments engineered with GORE-TEX<sup>®</sup> Active product technology are built for extreme breathability and are ideal for highly aerobic, done in a day activities. All components are built for optimised sweat management to ensure extreme breathability and optimum comfort in high aerobic conditions. The performance is also supported by a tight fitting and minimalistic garment design.

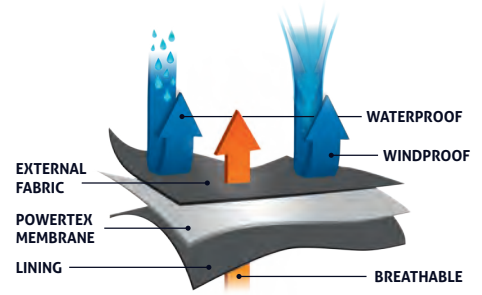

- extremely breathable
- lightweight (max. garment weight 400 g)
- excellent next-to-skin comfort

## GORE-TEX<sup>®</sup>

Garments engineered with GORE-TEX<sup>®</sup> product technology are durably waterproof and windproof combined with optimised breathability. Enduring products that maximise wearers' protection and comfort.

- Durably waterproof and windproof
- Optimized breathability
- GUARANTEED TO KEEP YOU DRY<sup>™</sup> promise

## POWERTEX

PowerTex fabric is highly breathable, wind-and-waterproof, water repellent and durable; it is also light, soft and has a comfortable feel for the wearer, and with all these features, offers an excellent price/quality ratio. During aerobic activities, the PowerTex membrane draws away from the body the moisture that is generated and evacuates it, distributing it on the fabric surface, reducing internal condensation and making the speed of the evaporation a lot faster; at the same time it prevents outside water to penetrate, therefore keeping the wearer warm, dry and comfortable. PowerTex fabrics are available in two, two and a half, and three layers.

### WINDSTOPPER® Soft Shell

Benefits:

- Total Windproofness: Protects your body's warmth from the chilling effects of wind and weather
- Maximum Breathability: Prevents overheating and perspiration build-up by allowing moisture vapour to easily escape
- Active Fit: Offers soft comfort with freedom of movement
- Versatile: Delivers comfort as a mid or outer layer
- Water Resistant: Sheds rain, snow and dries quickly.

WINDSTOPPER® fabrics offer soft, lightweight weather protection in one versatile and durable garment. Owing to their total windproofness and maximum breathability, our garments will keep you comfortable longer across a wide range of weather conditions and activities.

### Why Was PrimaLoft® Developed?

- In the 1980's, the US Army commissioned Albany International Corp. to develop a water resistant synthetic alternative to down. Today, PrimaLoft® is the premier supplier of insulation to the U.S. military, providing them with a tactical advantage under extreme wet and cold conditions.
- PrimaLoft® is now recognized globally as the benchmark in performance insulation.

### Engineered for Superior Performance

- Four key features that differentiate PrimaLoft® from all other synthetic insulations:
- Warmer Proprietary blend of small diameter fibers trap more air to insulate
- Drier Special finishes and small diameter fibers make PrimaLoft® insulation water resistant
- Softer Finer diameter fibers and proprietary finish make PrimaLoft® insulation ultra soft
- More Compressible Smaller diameter fibers allow PrimaLoft® insulation to compress into a smaller space

### Water Resistance How it Affects Warmth in Wet Conditions

- PrimaLoft® fibers have a proprietary treatment that are permanently cured onto the fibers.
- The treatment dramatically reduces the amount of moisture the fibers can adsorb, while at the same time changing the characteristics of the fibers so they physically repel water molecules.
- The microscopic fiber size of PrimaLoft® insulation creates a very tight surface tension that causes water molecules to bead up on the surface of the insulation.
- PrimaLoft® fibers adsorb approximately 100–250% weight in water while typical polyester insulations gain from 400–1,000% their weight in water.
- When fibers adsorb moisture, they conduct heat away from the body much faster than dry fibers. Because PrimaLoft® fibers adsorb very little moisture, PrimaLoft® insulation maintains the highest percentage of warmth when wet over competitive insulations.

Thermal performance describes how well insulation traps and retains warmth.

- Thermal performance is measured in CLO
- One Clo represents the amount of insulation required to keep a resting person warm in an indoor room at 70°F (21.1°C).

### Key Performance Advantages

- The benchmark in performance insulation weight ratio
- Highest Clo values—wet or dry
- Superior water repellency
- Highly compressible
- Excellent breathability
- Soft and compressible—feels like real goose down

<b>GOLD (one)</b>	Ultimate Performance, Warmth and Comfort The highest performing insulation on the market for warmth, water resistance, softness and compressibility	Dry 0.92 clo /oz/yd2 0.027 clo /g/m2 Wet 0.90 clo /oz/yd2 0.026 clo /g/m2

Polartec® Power Dry® fabrics are designed to keep your skin dry when you sweat. All fabrics in this series feature a patented bi-component knit construction that uses different yarns on either side of the fabric. This creates two different surfaces: one that is optimized to move moisture away from the skin, the other to dry quickly.

**IDEAL USES:** Polartec® Power Dry® fabrics are highly breathable, and are ideal as the base layer for all sports, either as underwear or technical shirting.

#### HOW DOES IT WORK?

Moisture and high relative humidity next to the skin cause discomfort. Polartec® Power Dry® keeps the skin dry through three complementary mechanisms:

1. The fabric is highly breathable and does not restrict the movement of moisture vapor.
2. "Touch points" on the fabric inner surface draw off the sweat. Sweat is wicked off the skin to the outside of the fabric where it spreads rapidly for evaporation. Polartec® Power Dry® fabrics move at least 30% more moisture away from the skin than single component fabrics.
3. When the sweat reaches the outside of the fabric, it spreads out to many times its original surface area, enabling it to dry at least 2 times faster than cotton.

Polartec® Power Grid™ fabrics are designed to keep your skin dry when you sweat. All fabrics in this series feature a bi-component knit construction that uses different yarns on either side of the fabric. This creates two different surfaces: one that is optimized to move moisture away from the skin, the other to dry quickly. Superior moisture management plus our patented (US Patent #6927182) Power Grid™ construction ensures that athletes get the most bang from their caloric buck. These fabrics weigh less, take up less pack space, and deliver more insulation and breathability than most fabrics in their class.

**IDEAL USES:** Polartec® Power Grid™ fabrics are highly breathable, and are ideal as the base layer for all sports, either as underwear or technical shirting.

#### GRID CONSTRUCTION:

The raised fabric pillars on the inside create touch points for moisture pick up off the skin. The open air channels between those pillars ensure that the fabric delivers the highest levels of breathability, compressibility, and the highest warmth per fabric weight. Polartec® Power Grid™ fabrics deliver performance in the cleanest way possible, by leaving out what you don't need.

Polartec® High Loft™ fabrics take insulation to a new level by maximizing warmth without weight, compressibility and breathability. They are the most technically advanced of the Polartec® insulation fabrics, achieving the utmost versatility and performance under extreme conditions. This level of performance is critical when all you have is what you can carry.

**IDEAL USES:** Polartec® Thermal Pro® High Loft™ fabrics are designed primarily as a highly efficient insulation layer for use with a shell in stop-and-go activities where weight and space are limited. When worn alone, they have exceptional breathability and quick dry time, for a remarkably broad comfort range. Excels in back country pursuits like mountaineering, skiing, and ice climbing.

#### HOW DOES IT WORK?

The key to this fabric's performance is in its unique patented construction (US Patent # 6196032, 6199410, 6832497, 6837078, 5855125). An open-mesh stitch promotes compressibility, increases airflow, and minimizes weight. Low density, high loft pile face and back minimizes weight but increases warmth and compressibility. The fabric maintains its loft wear after wear, for enduring warmth. Fabrics are at least 30% warmer per weight than standard fleece or the most common competitive "high loft" offering.

Polartec® Thermal Pro® fabrics are the most visually dynamic and technically advanced of the Polartec® insulation fabrics. Available in a variety of unique surface textures and patterns, many of which enhance performance, Polartec® Thermal Pro® fabrics are great styling options for virtually every end use. New high loft versions have achieved the highest warmth to weight ratios of any fabric Polartec® has ever offered. Other versions have the look of traditional wool with all the performance benefits of fleece. Polartec® Thermal Pro® is our most diverse family of fabrics.

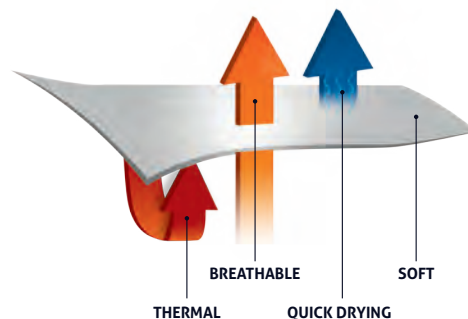

**Ideal Uses:** Polartec® Thermal Pro® fabrics are ideal for sweaters, jackets, pants and accessories for a wide range of cool weather applications. New technologies make Polartec® Thermal Pro® the highest performing, best looking fleece around.

Polartec® Alpha® is the latest evolution of synthetic insulation offering a rare combination of lightweight warmth and true breathability in a “puffy” style garment. Because Polartec® Alpha® insulation is highly durable and more stable than other synthetic insulation products, more open-construction woven face and back fabrics can be selected to create an air permeable package. This small amount of airflow rapidly draws moisture away from the body and allows Polartec® Alpha® to be worn in a wider range of activities compared to classic “vapor barrier” style insulation.

Ideal Uses: Polartec®Alpha® is designed primarily as a highly efficient insulation layer for use with a shell in stop-and-go activities where weight and space are limited. When worn alone, they have exceptional breathability and quick dry time, for a remarkably broad comfort range. Excels in back country pursuits like mountaineering, skiing, and ice climbing.

# DURASTRETCH

DURASTRETCH fabrics are a classic in mountaineering apparel; though extremely comfortable and lightweight, they are very resistant to abrasion and rips, and this, thanks to their main component: polyamide. They are truly made to be durable. Most of the DURASTRETCH fabrics in this collection are recommended for the hole year, since their inner structure quickly wicks away sweat.

This year again, the Durastretch family evolves towards a new kind of fabric: the Durastretch Powerlite. It is the lightest double weave version we ever offered until now for alpine climbing. Thanks to polypropylene threads weaved with the resistant polyamide, this fabric is even more soft and comfortable on the skin. This sensation is also increased thanks to the hydrophobic properties of polypropylene that push moisture and perspiration outside the garment. The tight weaving makes also this fabric wind-resistant without additional finishing.

# DRYTON

## DRYTON

DRYTON is easy-care, durable and resistant, and has the feel of natural fabrics. It is extremely functional, as it makes moisture move quickly along the length of its fibers and evaporate more efficiently, and it eliminates body moisture very rapidly. Therefore it protects the body from overheating during physical activity and from chilling after the action has ceased.

drirelease®  
cotton

- Dri-Release Cotton:
- 85% polyester / 15% cotton:
  - function with comfortable cotton touch
  - Removes perspiration fast
  - Dries 4x faster than cotton
  - FreshGuard prevents odor

THE FEEL GOOD MICROFIBRE  
**Dryarn**  
BY AQUAFIL

- excellent thermo-insulating capacity
- excellent moisture transport to support a healthy microclimate on the skin, both for summer and winter seasons
- extremely lightweight, colourfast and durable
- a naturally "bacteriostatic" fibre, it reduces the risk of irritation, allergies and rashes, as well as reducing odours

drirelease®  
**WOOL**

- Dri-Release Wool:
- 88% polyester / 12% wool
  - Warmer than 100% wool
  - No irritation on skin
  - Reduces clammy feeling against the skin
  - FreshGuard prevents odor

- 100% Polypropylene worsted spun yarn
- Excellent moisture transport
- Low thermal conductivity
- Highly abrasion resistant
- dirt and stain resistant
- odor-resistant

**Pittards**  
WORLD CLASS LEATHER

- Pittards Oiltac: grip-enhanced, treated leather
- limits water uptake into the fibre structure, thus guaranteeing excellent tactile sensitivity under the most adverse conditions
- treated to prevent the absorption of moisture, including sweat into the glove

# SIZING CHARTS

All of our fits are developed considering our body measurement chart and the end use of the garment within a layering system.

- ATHLETIC FIT:** sporty ergonomic fit with freedom of movement for the intended activity
- REGULAR FIT:** normal fit – comfortable, slightly ergonomic with freedom of movement
- SLIM FIT:** slim fit – closer to the body fit than our regular fit
- RELAXED FIT:** relaxed fit – looser fit than regular fit
- ARMOUR FIT:** suitable for wearing protection underneath
