#### TE RESPONSIBLE DOWN STANDARD

The TE Responsible Down Standard (RDS) ensures that down or feathers are sourced from responsibly treated geese, ducks, or other waterfowl, and tracks the material through the supply chain.

Products that ARE labeled with the RDS 100 logo contain 100% RDS-certified down and/or feathers.

#### BIONIC FINISH ECO

Inspired by nature, BIONIC-FINISH® ECO is an ecological hydrophobic finishing. Applied on garments, this fluorine-free recipe allows a very good repellency of water and aqueous substances.

Usually, durable hydrophobic finishes are based on fluorocarbon resins. This chemical is not degradable in the environment and is well-known for the damages it causes on plants and animals. Thanks to the nature of its molecules, BIONIC-FINISH® ECO is now our clean and effective alternative to fluorocarbon to make textiles hydrophobic. Our laboratory and field tests showed us that this finishing is suitable enough as valid alternative to the usual DWR treatment.

#### RECYCLED POLYESTER

Polyester is a synthetic fiber made from oil and commonly used in sports textiles for its capacities to move moisture away, to dry quickly and to resist to abrasion. About 65 to 70 percent of global polyester production is used for textiles, whereas the rest of it serves usually to create plastic bottles and other products packaging. Today, the technology allows us to use recycled polyester to make garments. Indeed, PET like bottles for example is collected (from recycling bins), washed, flaked and dried. It is then melted, re-extruded and spun to create threads ready to be weaved or knitted in order to create new garments. It was found that this recycle process can save up from 30 to 50 percent of the total energy needed to create PET.

Recycled PET's yarns keep the same qualities and characteristics and they can be used alone or mix together with other fibers to create wide ranges of textiles.

#### ORGANIC COTTON

Cotton generally enjoys a positive image but its production process does not exactly gain any plaudits from an environmental aspect. Indeed, conventional

cultivation methods utilize large quantities of water and wide amounts of artificial fertilizers like pesticides and poisonous chemicals. This in order to protect the crops from insects and diseases and to allow the plant to grow quickly, to the detriment of nature. (ground, groundwater and air)

To overpass these drawbacks, alternative exists. It is named organic cotton. Its production method is more eco-friendly, using no pesticides, preventing the waste of water and implementing a "soil management" in order to preserve the ground from defertilization. Also, replacing conventional cotton by organic one gives the chance to small farmers to sell more easily their productions. All the benefits of conventional cotton such as softness, comfort and hypoallergenic are remaining. However, this new process requires more time, a lower yield and therefore higher costs.

#### **FAIR WEAR FOUNDATION**

Fair Wear Foundation (FWF) is an independent, non-profit organisation that works with companies and factories to improve labour conditions for garment

All members must sign the 8-point FWF Code of Labour Practices, which is based on UN and ILO principles. Each year FWF reports publicly on members' progress towards implementation of the code in their supply chains.

SALEWA is a member of the FWF and works actively towards fair and healthy labor conditions in the factories where our textile products are produced.

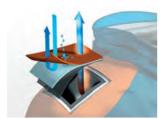

FWF is active in 15 production countries in Asia, Europe and Africa.

#### THE BLUESIGN® SYSTEM – MANAGING INPUTS. RESPONSIBLE ACTIONS.

The bluesign® system focuses on chemicals and their impact on resources, people and the environment. With its holistic approach based on Input Stream Management in the textile production, the bluesign® system reduces the negative impact chemicals have on people and on the environment, ensures responsible use of resources and guarantees the highest level of consumer safety. The textile industry's most stringent criteria and monitoring of on-site implementation encourage companies along the entire textile value chain to improve their sustainability performance. Components fulfilling these strict chemical end environmental criteria are labeled "bluesign® approved".

#### GORE C-KNIT NEW

Garments made with the new 3-layer GORE-TEX® products with GORE® C-KNIT™ backer technology are durably waterproof, breathable and wind-proof. This lightweight 3-layer fabric delivers improved comfort without compromising the durability necessary to withstand the physical hazards often encountered outdoors. The high level of breathability, combined with the guaranteed waterproof and windproof protection that comes with the GORE-TEX® brand, delivers optimal comfort and protection for outdoor enthusiasts who enjoy hiking, trekking, all mountain skiing/snowboarding and freeriding in a wide range of conditions.

- Optimal comfort with breathability increased by as much as 15 percent\*
   Lighter garments are possible with a 10 percent reduction in fabric weight\*
   Long-lasting weather protection backed by the GUARANTEED TO KEEP YOU DRY™ promise
   Uncompromised durability without added bulk from the three-layer con-

- Visual differentiation from other backers from circular knit pattern
   \*Compared to previous 3-layer GORE-TEX® products with tricot backer.

#### **GORE-TEX® PRO**

Garments engineered with GORE-TEX® Pro product technology are built for maximised ruggedness and are ideal for extreme and extended use.
All components are built for maximised ruggedness while strict textile performance specifications ensure optimum strength. All GORE-TEX® Pro garments must pass Gore's toughest test conditions and most aggressive rainsform test.
- Durably waterproof and windproof

- Extremely rugged and durable materials
- Extremely breathable

#### **GORE-TEX® ACTIVE**

Garments engineered with GORE-TEX® Active product technology are built for extreme breathability and are ideal for highly aerobic, done in a day activities. All components are built for optimised sweat management to ensure extreme breathability and optimum comfort in high aerobic conditions. The performance is also supported by a tight fitting and minimalistic garment design.

- extremely breathable
- lightweight (max. garment weight 400 g)
- excellent next-to-skin comfort

Garments engineered with GORE-TEX® product technology are durably water-proof and windproof combined with optimised breathability. Enduring products that maximise wearers' protection and comfort.

- Durably waterproof and windproof
- Optimized breathability GUARANTEED TO KEEP YOU DRY™ promise

#### WINDSTOPPER® Soft Shell

- Benefits:

   Total Windproofness: Protects your body's warmth from the chilling effects of wind and weather

   Maximum Breathability: Prevents overheating and perspiration build-up by allowing moisture vapour to easily escape
- Active Fit: Offers soft comfort with freedom of movement
   Versatile: Delivers comfort as a mid or outer layer
- Water Resistant: Sheds rain, snow and dries quickly.

WINDSTOPPER® fabrics offer soft, lightweight weather protection in one versatile and durable garment. Owing to their total windproofness and maximum breathability, our garments will keep you comfortable longer across a wide range of weather conditions and activities.

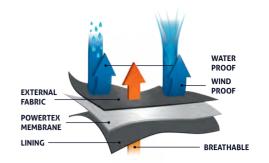

#### **WINDSTOPPER GLOVES**

Gloves engineering with WINDSTOPPERÒ liners offer an optimum combination of absolute windproofness, water-resistance and unrestricted breathability. These gloves protect your hands from the chill effects of the wind and light rain or snow. While allowing moisture vapor to easily escape from the inside, less moisture will be trapped in the insulation so it remains drier thus your hands stay warmer. By attaching new wicking and moisture management linings to the WINDSTOPPER ä membrane, we achieved major improvements in skin comfort.

POWERTEX

Powertex fabric is highly breathable, wind-and-waterproof, water repellent and durable; it is also light, soft and has a comfortable feel for the wearer, and with all these features, offers an excellent price/quality ratio. During aerobic activities, the Powertex membrane draws away from the body the moisture that is generated and evacuates it, distributing it on the fabric surface, reducing internal condensation and making the speed of the evaporation a lot faster; at the same time it prevents outside water to penetrate, therefore keeping the wearer warm, dry and comfortable. Powertex fabrics are available in two, two and a half, and three layers.

Polartec® Alpha® is the latest evolution of synthetic insulation offering a rare combination of lightweight warmth and true breathability in a "puffy" style garment. Because Polartec® Alpha® insulation is highly durable and more stable than other synthetic insulation products, more open-construction woven face and back fabrics can be selected to create an air permeable package. This small amount of airflow rapidly draws moisture away from the body and allows Polartec® Alpha® to be worn in a wider range of activities compared to classic "vapor barrier" style insulation.

Ideal Uses: Polartec®Alpha® is designed primarily as a highly efficient insulation layer for use with a shell in stop-and-go activities where weight and space are limited. When worn alone, they have exceptional breathability and quick dry time, for a remarkably broad comfort range. Excels in back country pursuits like mountaineering, skiing, and ice climbing.

BLUESIGN				bluesign <sup>®</sup> APPROVED FABRIC	bluesign <sup>®</sup>

The Tyrolean mountain sheep, the typical type of sheep in the Tyrolean Alps, is an important part of the Alpine region that help people there maintain high-Alpine meadows

During the spring, the sheep always move to high ground in the Alps, returning in the fall to the valley. It is quite impressive to observe the freedom with

which the Tyrolean sheep move about in the mountains.

The Tyrolean Mountain Rescue team has tested the quality of the wool over the course of many years, learning to highly value its qualities. One can't imagine the team's gear without this fiber. In fact, the team has become an ambassador for the wool used in functional apparel on the mountain, continuing a thousands-year-old tradition. Mountain peoples all over the globe (not only in the Alps) use this wool to protect themselves from cold, wet or chilling conditions. Over and over, the wool's outstanding properties are rediscovered and re-endorsed.

A study of wool materials used in functional apparel conducted in partnership between the Tyrolean Mountain Rescue and Austria's University of Innsbruck

Technology Center for Ski and Alpine Sport confirmed: Wool supports the body's feeling of well-being, both when under stress and when relaxed. Wool manages your personal microclimate, prevents over-heating, and helps avoid harmful chills.

In cooperation with Tyrolean Mountain Rescue, Salewa has been allowed to have an exchange of valuable experiences that have led to the creation of a line

of innovative, functional products.

Washable- Chlorine-free Wool insulation

Tyrolean mountain sheep are put out to pasture in grazings at about 2000 meters above the sea level all summer long, where they can eat only the best fodder. The healthy air, the rich pasture and the fresh water of the mountains foster the health of these animals and consequently influence the quality of the

wool significantly. The result is a fleece made by long, straight or lightly wavy fibers, which is both strong and soft.

Through the special Oxy-wash (Aqua O2) treatment the scales of the wool are eliminated without damaging the structure of the fibers. Thanks to this eco-friendly process the fiber of the fine Tyrolean mountain sheep's wool becomes soft, odourless, hygroscopic and breathable. Moreover, the characteristics of the wool remain unchanged even after several washings in the washing machine.

## DOWN

Down is an underlayer of fine feathers found in water birds such as geese and ducks. A purely natural product, down has some amazing characteristics. Light as a snowflake, down protects from the cold, yet at the same time is extremely compressible. No other material achieves a comparable level of insulation at such a low weight. On top of that, down products can be folded up very small because of their great elasticity. A thorough shaking quickly restores the original shape.

Top quality down thus has a decisive edge over synthetic solutions, and is unbeatable when it comes to tough demands. Here at SALEWA, goose down is essential for a large part of our mountain sports collection – both in the apparel and equipment ranges.

In recent years environmentalists and animal welfare activists have uncovered new practices that contravene proper treatment and welfare of animals. Many animal welfare organisations criticise above all what is called live-plucking, a practice where the animal's feathers are plucked before moulting begins.

SALEWA is committed to the fair and proper handling of all the natural resources which we use. We take pains to ensure that our down jackets and down sleeping bags are filled solely with top quality down which has been obtained by fair methods. To ensure that our down complies with the high requirements of quality and sustainability, we have defined strict guidelines in our "Down and feather sourcing and production assurance standard" (DFS). These quality requirements are part of our Conditions of Purchase contracts that every supplier must sign before we work with them. Our quality management team checks adherence to the guidelines on an ongoing basis. We thus bar the use of down obtained from 'live-plucking' or from geese used in foie gras production. We use exclusively white down, because grey geese are being increasingly used for fattening to produce foie gras.

#### TE RESPONSIBLE DOWN STANDARD

The TE Responsible Down Standard (RDS) ensures that down or feathers are sourced from responsibly treated geese, ducks, or other waterfowl, and tracks the

Products that ARE labeled with the RDS 100 logo contain 100% RDS-certified down and/or feathers.

Why Was PrimaLoft® Developed?

- In the 1980's, the US Army commissioned Albany International Corp. to develop a water resistant synthetic alternative to down. Today, PrimaLoft® is the premier supplier of insulation to the U.S. military, providing them with a tactical advantage under extreme wet and cold conditions
- PrimaLoft® is now recognized globally as the benchmark in performance

**Engineered for Superior Performance**Four key features that differentiate PrimaLoft® from all other synthetic insulations:

Warmer Proprietary blend of small diameter fibers trap more air to insulate Drier Special finishes and small diameter fibers make PrimaLoft® insulation

Softer Finer diameter fibers and proprietary finish make PrimaLoft® insulation ultra soft

More Compressible Smaller diameter fibers allow PrimaLoft® insulation to compress into a smaller space

#### Water Resistance How it Affects Warmth in Wet Conditions

- PrimaLoft® fibers have a proprietary treatment that are permanently cured onto the fibers
- The treatment dramatically reduces the amount of moisture the fibers can adsorb, while at the same time changing the characteristics of the fibers so they physically repel water molecules
- The microscopic fiber size of PrimaLoft® insulation cre ates a very tight surface tension that causes water molecules to bead up on the surface of the insulation
- PrimaLoft® fibers adsorb approximately 100–250% weight in water while typical polyester insulations gain from 400–1,000% their weight in water.
  When fibers adsorb moisture, they conduct heat away from the body much faster than dry fibers. Because PrimaLoft® fibers adsorb very little moisture, PrimaLoft® insulation maintains the highest percentage of warmth when wet over competitive insulations.

Thermal performance describes how well insulation traps and retains warmth.

- Thermal performance is measured in CLO
   One Clo represents the amount of insulation required to keep a resting person warm in an indoor room at 70°F (21.1°C).

#### **Key Performance Advantages**

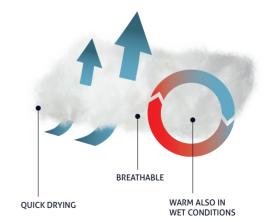

- The benchmark in performance insulation weight ratio Highest Clo values—wet or dry
- Superior water repellency
- Highly compressible
- Excellent breathability
   Soft and compressible—feels like real goose down

GOLD (one)	Ultimate Performance, Warmth and Comfort  The highest performing insulation on the market for warmth, water resistance, softness and compressibility	Dry 0.92 clo /oz/yd2 0.027 clo /g/m2 Wet 0.90 clo /oz/yd2 0.026 clo /g/m2

excellent warmth and insulation qualitiy

- quick drying
- lightweight
- breathable
- highly compressibleextremely easy care

Powerloft traps air in small pockets. Air that has been warmed by body heat and store is the best form of insulation. Designed to feel like down, Powerloft is composed of fine micro-filaments with many tiny airspaces. The more airspaces, the higher the warmth and insulation. An animal's fur and a bird's feathers demonstrate this basic rule of nature since they must naturally be able to protect themselves from the cold.

Powerloft fibers are water repellent, lightweight and soft

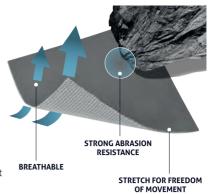

Powerloft warms even when wet, is breathable, can be highly compressed, and dries quickly. Machine washable, thus also easy care.

## **DURA**STRETCH

#### DURASTRETCH

DURASTRETCH fabrics are a classic in mountaineering apparel; though extremely comfortable and light-weight, they are very resistant to abrasion and rips, and this, thanks to their main component: polyamide. They are truly made to be durable. Most of the DURASTRETCH fabrics in this collection are recommended for the hole year, since their inner structure quickly wicks away sweat.

This year, the Durastretch family evolve towards a new kind of fabric: the Durastretch Powerlite. It is the lightest double weave version we ever offered until now for alpine climbing. Thanks to polypropylene threads weaved with the resistant polyamide, this fabric is even more soft and comfortable on the skin. This sensation is also increased thanks to the hydrophobic properties of polypropylene that push moisture and perspiration outside the garment. The tight weaving makes also this fabric wind-resistant without additional finishing.

schoeller®-naturetec is the unique soft-shell combination of soft, natural fibres and functional materials. The ideal companion for all outdoor activities where freedom of movement and a good body temperature are equally important, schoeller®-naturetec is exceptionally hard wearing, pleasantly soft, lightweight and kind to the skin.

Combination of nature and function Elastic and hard wearing Weatherproof Comfortable and light High level of breathability

#### Construction:

Hard wearing fabric construction using natural fibres in our case merino wool on the inside and polyamide for a rough and resitant outside

The elastic wind and water repellent schoeller(r)-WB-400-soft-shell fabric is the perfect companion for all your outdoor activities. Different bonded layers of elastic fabric ensure maximum function and are extremely comfortable to wear. No matter what you love to do, schoeller(r)-WB-400 is with you all the way, guaranteeing effective weather protection and maximum freedom of movement.

- Perfect weather protection
- Wind and water resistantGood breathability
- Highly elastic
- Cosy and comfortable inside

Effective heat management

Light colored textiles reflect both visible and invisible rays of sunlight, meaning both heat and light. Dark colored textiles absorb both types of rays and therefore absorb heat. coldblack® reduces this absorption of heat rays, particularly in the case of darker colors, and in all types of textiles. The result is tangibly better heat management. Because textiles finished with coldblack® heat up less in all colors compared with material without a coldblack® finish.

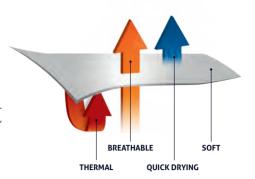

3XDRY® treatments combine two technologies into one textile: on the outside the textile is finished with a water-repellent function, whereas on the fabric's inside it absorbs perspiration. The treatment does not affect the appearance, hand or the air permeability features of the fabric.

- Advanced Moisture Management System
- Enables the skin to breatheEnsures wear-comfort you can see and feel
- Is applicable on all textiles (cotton, synthetics, etc.)
  Is a "bluesign®-approved-process"

POLARLITE
The POLARLITE brand is the symbol of Salewa's long experience and enthusiasm for fleece. The POLAR-LITE range includes products of various weights and characteristics (stretch, microfiber, body-mapping, printed shirt fabrics) to meet all the demands of high-altitude outdoor activities.

Polartec® Thermal Pro® fabrics are the most visually dynamic and technically advanced of the Polartec® insulation fabrics. Available in a variety of unique surface textures and patterns, many of which enhance performance, Polartec® Thermal Pro® fabrics are great styling options for virtually every end use. New high loft versions have achieved the highest warmth to weight ratios of any fabric Polartec® has ever offered. Other versions have the look of traditional wool with all the performance benefits of fleece. Polartec® Thermal Pro® is our most diverse family of fabrics.

Ideal Uses: Polartec® Thermal Pro® fabrics are ideal for sweaters, jackets, pants and accessories for a wide range of cool weather applications. New technologies make Polartec® Thermal Pro® the highest performing, best looking fleece around.

- Technical Highlights:

  1) Extremely abrasion resistant face for long lasting durability; fabric maintains its form and function regardless of abrasive contact

  2) Blocks 98% of the wind to prevent wind chill,but allows enough air to circulate to keep you from overheating

  3) Water repellent surface sheds rain and snow

  4) Highly breathable; resists heat stress buildup during action sports

  5) Non-restrictive fit allows full range of motion

  6) Provides warreth without the weight and bulk of traditional insulating fabrics

- 4) Fighty breathacter resists 1.5

  5) Non-restrictive fit allows full range of motion

  6) Provides warmth without the weight and bulk of traditional insulating fabrics

  7) Creates less noise than a traditional shell

  8) Machine washable

# **DRYTON**

#### DRYTON

DRY'TON is easy-care, durable and resistant, and has the feel of natural fabrics. It is extremely functional, as it makes moisture move quickly along the length of its fibers and evaporate more efficiently, and it eliminates body moisture very rapidly. Therefore it protects the body from overheating during physical activity and from chilling after the action has ceased.

#### What are the benefits of Polygiene®?

- What are the benefits of Polygiene®?
  Polygiene® inhibits the growth of microorganisms such as bacteria and fungi that cause odor.
  Your garments, footwear and gear will:

   Stay Fresh Polygiene® inhibits the growth of odor-causing bacteria. Odor develops when bacteria settles into the fabric, mixes with sweat and multiplies.

   Hygienic Less bacteria and fungi in footwear, wetsuits and gear helps reduce tinea infections, such as athlete's foot.

   Environmentally friendly Polygiene®-treated clothing can be worn for longer periods of time before laundering is required. Therefore less energy, less water and less detergent are used. When traveling or hiking, you can pack less clothing and travel light with less luggage.

   Longer lifetime Prolongs garment, footwear and gear lifetime by eliminating the bacteria that break down synthetic fibers.

   Polygiene® treatment is guaranteed to last the lifetime of the garment, footwear or gear.

#### The fibres used for loden are vergin wool/merino wool because they are tough, natural, practical, safe and good for the skin and body climate?

Our products are particularly pleasant to wear. They are low maintenance, robust, and look good for a long time. The elasticity of wool makes loden almost free from creasing. Wool is a renewable raw material and biologically degradable. Loden and "boild wool" are easily aired, and are naturally odour and dirt-resistant. Vergin wool products are breathable and safe because they don't burn easily. Vergin wool yarn has thermal properties. It can absorb up to one third of its own weight and wick away from the skin, without feeling damp. It has a low electrostatic charge. Wool has a pH of 4.9 compared with a pH of 4.5 for human skin. In addition loden and "boild wool" are wind resistant.

#### The history of "boild wool" and loden

Loden and "boild wool" stand for tradition, a legacy handed down through the generations, and pure nature.

Nature is the basis and starting point for making loden. The fabrics are produced naturally to this day. According to folklore, "walk" or boiled wool was developed by alpine farmers. They discovered, probably by accident, that woollen clothes that became matted during washing actually offered more wearing comfort and protection from the weather than when new.

From that point on, they began using the "walk" method to make knitted and woven clothing more weather resistant and robust. The "walk" method enhances the properties of sheep's wool.

The matting of wool arises as a result of the roughened nature of the surface structure as well as its high elasticity and formability. When dry, wool doesn't matt. The planned, controlled matting process is known as "walk". This is a mechanical procedure that is carried out today by rubbing wool using hot water and soap. It has been handed down from generation to generation.

#### **SARNER KNIT**

"Sarner" knit, as its called in the Alps, is an authentic Alpine style of knitting. Over hundreds of years, its tradition has been preserved in all of the valleys where Sarner still protects people people from cold and frost.

Its first mention dates back to 1500. The quality of the wool that has been used since the beginning comes from native mountain sheep that live closely together with people in the Alpine region. The distinctive function stems from the purl stitch pattern, its loops on both sides, as well as the unique tension of the knit that achieves its characteristic

Garner must be knit with a much finer needle with the yarn put under tension.)
That makes this knit wind resistant, warm due to the double loops, and water resistant thanks to wool's naturally higher lanolin content. In addition, this style of knitting is especially durable and long lasting – all characteristics that help explain why this style of clothing became so widely popular in the Alpine regions. Salewa's Sarner knit embraces this tradition and expertise. Thus, the company achieves a product made in the Alps by specialized master craftsman with knowledge steeped in tradition.

We spin and knit the wool in Tyrol, Austria. We design, develop and sew thr üieces in South Tyrol/Nothern Italy This project is bringing new life, today, to yesterday's traditions

#### **ORGANIC COTTON**

Cotton generally enjoys a positive image but its production process does not exactly gain any plaudits from an environmental aspect. Indeed, conventional cultivation methods utilize large quantities of water and wide amounts of artificial fertilizers like pesticides and poisonous chemicals. This in order to protect the crops from insects and diseases and to allow the plant to grow quickly, to the detriment of nature. (ground, groundwater and air)

To overpass these drawbacks, alternative exists. It is named organic cotton. Its production method is more eco-friendly, using no pesticides, preventing the waste of water and implementing a "soil management" in order to preserve the ground from defertilization. Also, replacing conventional cotton by organic one gives the chance to small farmers to sell more easily their productions. All the benefits of conventional cotton such as softness, comfort and hypoallergenic are remaining. However, this new process requires more time, a lower yield and therefore higher costs.

# cotton

Dri-Release Cotton:

- 85% polyester / 15% cotton:
- function with comfortable cotton touch
- Removes perspiration fast
- Dries 4x faster than cotton
- FreshGuard prevents odor

- excellent thermo-insulating capacity
- excellent moisture transport to support a healthy microclimate on the skin, both
- for summer and winter seasons extremely lightweight, colourfast and durable a naturally "bacteriostatic" fibre, it reduces the risk of irritation, allergies and rashes, as well as reducing odours

- Dri-Release Wool: 88% polyester / 12% wool Warmer than 100% wool
- No iritation on skin
- Reduces clammy feeling against the skin
  FreshGuard prevents odor

- -100% Polypropylene worsted spun varn
- Excellent moisture transport
- Low thermal conductivity
  Highly abrasion resistant
- dirt and stain resistant
- odor-resistant

- Pittards Oiltac: grip-enhanced, treated leather
- limits water uptake into the fibre structure, thus guaranteeing excellent tactile sensitivity under the most adverse conditions
- treated to prevent the absorption of moisture, including sweat into the glove
