CORPORATE SOCIAL RESPONSIBILITY

bluesign® System Partner

To offer sustainable products, both materials and production processes must be monitored to minimize negative impact on the environment and people. We have been a bluesign® system partner since 2011. The independent bluesign® system has the most stringent criteria and monitoring of textile production processes and encourages companies along the entire textile value chain to improve their sustainability performance. The bluesign® system is applied at the point where production starts. Suppliers, manufacturers and brands have to go through rigorous checks in order to comply with bluesign® criteria. Instead of certifying finished products, all substances and raw materials are verified before production. This guarantees sustainable ingredients and clean processes to make safely manufactured products. It allows us to better manage natural resources, reduce water and air emissions, improve waste water treatment and further reduce our ecological footprint.

The bluesign® system is based on 5 principles: Resource Productivity, Consumer Safety, Water Emission, Air Emission, Occupational Health & Safety.

PFC-free Durable Water Repellents (DWR)

Fluorocarbons (PFCs) are a type of chemical used to make products resistant to water, grease and stains. Some PFCs are environmentally hazardous substances, which are persistent in the environment. Up to now, there is no evidence of direct health risks from wearing clothes with PFCs. However, PFCs released into the environment break down very slowly and can remain there for several hundred years. PFCs have been found in snow and secluded mountain lakes, and even in wildlife in the Arctic. Some outdoor gear manufacturers are working to replace long-chain (C8) fluorocarbon-based treatments in DWR, with short-chain (C6) PFCs that provide durability and water resistance but don't last as long in the environment. For this reason, since 2014 we have completely eliminated long-chain PFCs (C8) from all our products. All of our water-resistant products now either contain shorter-chain PFCs (C6) or are 100% PFC-free. For SALEWA products to be used in extreme weather conditions, it is necessary to apply C6 DWR treatment to ensure full weather protection and warmth. We are continuously investing to further reduce the use of C6-chemicals in our fabrics and significantly increase the number of PFC-free products without compromising on user-safety performance. Our current PFC-free (no use of C6 and C8 chemicals) durable water repellent finishes can be identified by the BIONIC FINISH® ECO label, TEFLON™ ECOELITE™ and PHOBOTEX® PFC FREE as well as the PFC-free icon. Please note that contamination from PFCs cannot be excluded.

Fair Wear Foundation

Every single person who works for SALEWA® is important to us! We are committed to ensuring good and fair working conditions, both in our own offices and at our suppliers' manufacturing facilities. To ensure the wellbeing of workers involved in the making of our textile products, we have been working together with the Fair Wear Foundation (FWF) since 2013. They help us monitor working conditions and audit our factories, they support us in our relations with our suppliers and they check on us to make sure we are walking our talk. Currently, 96% of our textile production is under active monitoring for fair working conditions (the factories have either been audited by external experts on worker rights or are located in low-risk countries such as Italy and Germany). Despite the fact that 100% "fair clothing" is an elusive goal, we are working hard to achieve it. Step by step, in close cooperation with our suppliers, we make improvements that are reviewed with the support of the Fair Wear Foundation. During the last review, the FWF re-confirmed our status as a Leader brand. The Leader category applies to FWF members who are doing exceptionally well and operating with high transparency and showing best practice. Fair Wear Foundation acknowledges that our efforts and commitment to ensuring good and fair working conditions in textile production are paying off and that we are continuing to make great progress.

www.fairwear.org/resource/salewa-performance-check-2017/, www.salewa.com/fair-wear-foundation

Responsible Down Standard

The main issue about down is that birds can be subject to unnecessary harm during harvesting. SALEWA takes animal welfare very seriously. We believe that ducks and geese have the right to lead a dignified life following the guidelines of the internationally recognized Five Freedoms of animal welfare. Birds should be protected from unnecessary suffering, whether force feeding or live plucking. To ensure our down jackets are only filled with high quality, ethically harvested down, SALEWA only purchases down that comes with RDS (Responsible Down Standard) certification. RDS is currently the most comprehensive animal welfare and traceability standard worldwide. The standard is independent, defines unmistakable requirements and is based on regular checks and strict inspections.

RDS certified means:

- No to live plucking and force-feeding of ducks and geese
- Yes to the "Five Freedoms" for animals
- No to slaughter of animals only for down and feathers
- Annual inspections – of every stage in the supply chain
- Transparent procedures to protect the credibility of the standard

GORE-TEX® fabrics lead the way in waterproof protection, breathability and durability for technical outdoor apparel.

WATER COLUMN: 28 000 mm
BREATHABILITY: <6 RET

Garments made with **GORE-TEX®** product technology are durably waterproof, windproof and highly breathable.

GORE-TEX® product technology provides reliable weather protection and maximum comfort for a wide range of activities. These garments keep your body dry by allowing perspiration vapour to escape, so you remain cool during activity and warm during rest breaks and afterwards.

The GORE-TEX® membrane is completely water- and windproof and at the same time allows sweat to pass through it. The membrane is formed by pores (over 9 billion pores per square inch) which are 20,000 times smaller than a drop of water, but 700 times larger than a water vapour molecule preventing water penetration and helping the skin breathe. Resistance tested in the lab, simulating the most extreme atmospheric conditions.

Available in a 2-layer and 3-layer construction:

2-LAYER CONSTRUCTION

Garments made with 2-layer GORE-TEX® fabric are the versatile solution for style, comfort and protection against the elements.

3-LAYER CONSTRUCTION

Garments made with 3-layer GORE-TEX® fabric offer added durability without extra bulk. The reduced number of layers required mean less weight and more freedom of movement.

We also use GORE-TEX Stretch - a 3L fabric in our mountaineering line.

BENEFITS:

- durably waterproof and windproof
- very breathable
- maximum comfort and protection for a wide range of activities and weather conditions
- everyday versatility

WATER COLUMN: 22.000 mm
BREATHABILITY: <4 RET

Garments made with the newest generation of GORE-TEX® Active 3-layer product technology are lightweight, soft, quiet and extremely breathable. They deliver the waterproof and windproof performance of a hard shell with the pleasant touch and next to skin comfort of a soft shell. GORE-TEX® Active fabric is ideal for done-in-a-day activities, even in bad weather. Since its wearers subject fabrics to intense wear and extensive washing, GORE-TEX® Active offers increased durability to maintain waterproofness and live up to the GORE-TEX® promise: **GUARANTEED TO KEEP YOU DRY™**. GORE-TEX® Active is ideal for all-weather, high-energy use, such as speed hiking. It lets wearers enjoy aerobic activities, without weighing them down. It helps prevent overheating, and does away with excessive pack sizes.

GORE-TEX® Pro

WATER COLUMN: 28 000 mm
BREATHABILITY: <6 RET

Garments made with **GORE-TEX® Pro** product technology are durably waterproof, windproof and extremely breathable. Their high performing membrane and robust face fabrics are rugged and hard-wearing. GORE-TEX® Pro is ideal for extended mountaineering use in extreme weather.

GORE-TEX® Pro fabric's construction keeps your body dry by reducing the accumulation of sweat, so you remain cool during aerobic activities and warm during rest breaks and after activity has ceased. Made to meet the high demands of (ski)mountaineers, freeriders, mountain guides and serious outdoor enthusiasts, garments made with 3-layer GORE-TEX® Pro fabric are engineered with added durability to withstand abrasion in rugged environments while protecting against extreme and unpredictable conditions with frequent work-rest cycles.

GORE-TEX® Pro products for mountain sport activities use a 100 % ePT-FE-based multilayer membrane system with a unique microstructure. The membrane is durably bonded to both the outer material and a specially developed robust inner lining. Outer materials have to meet strict performance criteria (denier ≥40) and are given a thin, low denier Gore Micro Grid Backer technology which enhances breathability and reduces weight.

BENEFITS:

- durably waterproof and windproof
- breathable
- extremely rugged and durable

We use GORE-TEX® Active product technology that combines a newly developed lightweight GORE-TEX® membrane with fine 13 to 15 denier performance fabrics to deliver a high performance 3-layer solution. The subsequent streamlined laminate construction and optimized garment design allow superb heat loss and moisture vapour transportation. GORE-TEX® Active also meets the GORE-TEX® minimum performance requirement for water entry pressure (>28 metres).

BENEFITS:

- extremely breathable, reduced sweat accumulation (RET <4)
- durably waterproof and windproof
- specially developed for high energy activities in all weather conditions
- improved softness and next-to-skin comfort
- quieter and lighter

**POWER
TEX**

POWERTEX is our proprietary breathable, waterproof and windproof shell fabric with a water-repellent finish.

POWERTEX is developed to provide the right combination of performance, weight, durability and comfort. It has a waterproof polyurethane-based membrane. During aerobic activities the breathable membrane transports vapour to the outside, reducing internal condensation and maintaining a comfortable wear climate.

Our **POWERTEX** fabrics are available in **2, 2.5, AND 3-LAYER** constructions to cover a range of different performance levels.

**POWER
TEX
PRO**

POWERTEX PRO® is a strong and light, hardwearing waterproof fabric for ski mountaineering and alpine climbing apparel. We use it, for example, in a 3-layer version for the ORTLES PTX 3L STRETCH jacket in our mountaineering collection.

POWERTEX PRO® is Salewa's strongest POWERTEX 3-layer shell fabric. It provides durable, long lasting performance. It is made with Cordura yarns that offer enhanced tear and abrasion resistance. In addition, its elastane content allows extra freedom of movement. POWERTEX PRO® is made of 94% nylon CORDURA®, 6% elastane and has a PFC-free DWR finish. A waterproof and highly robust, PFC-free material that keeps you dry from the outside, whilst your sweat can escape easily from inside through the ultra-thin membrane.

BENEFITS:

- Extremely waterproof membrane (min. 20.000 mm) that keeps you dry even in the harshest conditions
- Highly breathable fabric keeps you dry and comfortable when you sweat
- windproof
- strong and light
- freedom of movement, due to 6% elastane content
- durable, long-lasting performance
- good strength-to-weight ratio, due to CORDURA®
- Tear and abrasion resistant CORDURA yarn increases the durability of your product
- high tenacity nylon yarns
- natural matt appearance
- PFC-free
- strongest

**POWER
TEX
ACTIVE**

POWERTEX ACTIVE

POWERTEX ACTIVE is a more advanced formula to ensure the highest levels of performance for our Alpine & Mountaineering apparel. Available in 3-Layer constructions. A highly breathable membrane lets sweat escape easily to the outside, while the water- and windproof laminate construction with a PFC-free durable water-repellent finish keeps you dry from the outside.

BENEFITS:

- Extremely waterproof membrane (min. 10.000 mm) that keeps you dry even in the hardest conditions
- windproof
- Highly breathable fabric keeps you dry and comfortable when you sweat (min. 10.000g/m/24hr.)
- durable
- abrasion-resistant
- lightweight
- packable
- PFC FREE membrane helps reduce environmental impact without compromising on performance. Excellent value for money

INSULATION & PADDING

High-performance **DOWN** is a fill and insulation material. We use it in our apparel and sleeping bags.

DOWN is an astonishing natural material. It has an excellent warmth-to-weight ratio, a high level of heat retention and a small, compressible pack size.

No other material combines such low weight with such high thermal insulation. High-quality DOWN has decisive advantages over synthetic fill materials.

DOWN is a by-product of the food & meat industry where waterfowl (ducks and geese) are raised for meat or eggs.

SALEWA only uses Responsible Down Standard (RDS) down. For more information about RDS certification, please see page 136.

BENEFITS:

- excellent warmth-to-weight ratio
- high heat retention
- packable
- lightweight
- 100% RDS down

FINISHING

Polygiene

POLYGIENE® is a fabric technology that inhibits the growth of odor-causing bacteria.

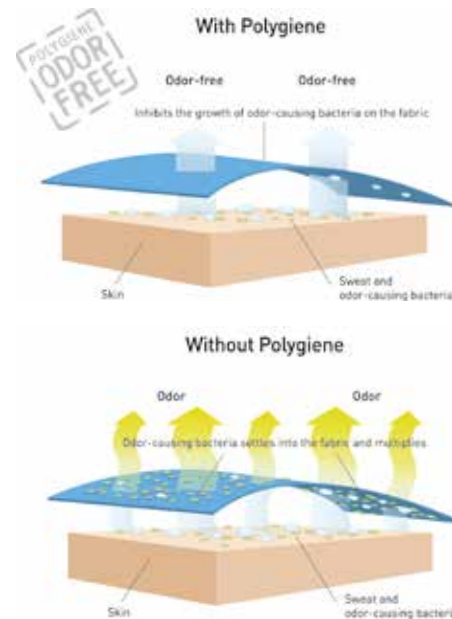

POLYGIENE® is applied at the finishing stages of textile production. It uses low concentrations of silver salt (silver chloride), which has antimicrobial properties and is naturally present in water and soil, to safely eliminate the ability for bacteria and fungi to grow.

Odor control for the lifespan of the garment is made possible as the technology is bound and permanently integrated in the fabric and will not wash out.

POLYGIENE silver salt technology is only active on the textiles itself. With a heritage in the healthcare sector, POLYGIENE has applied its expertise and testing to ensure that it has no effect on the natural bacterial flora of the skin. POLYGIENE is not nanosilver.

BENEFITS:

- prevents odors
- permanently integrated odor control
- does not interfere with the skin's natural bacterial flora
- environmentally friendly: wear it longer and wash it less
- hygienic: less bacteria, less infections
- long lasting: eliminates bacteria that break down synthetic fibres
- saves weight: pack less apparel on multi-day treks

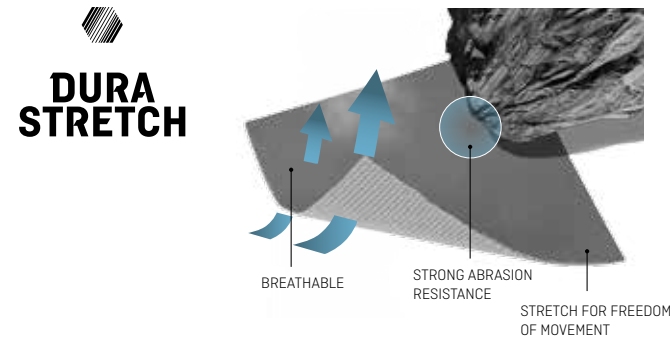

STORMWALL is our proprietary softshell fabric.

STORMWALL is windproof and highly breathable. It's designed to keep the wearer warm, dry, and comfortable while providing excellent freedom of movement. STORMWALL has a DWR finish, windproof membrane and high stretch content.

BENEFITS:

- windproof
- water-repellent
- highly breathable
- freedom of movement
- 2-way stretch
- durable
- light insulation

DURASTRETCH is our proprietary abrasion-resistant fabric. We use it to make our hard-wearing jackets and gilets, pants and shorts, reinforcing knee and side inserts and gloves for alpine climbing, trekking and hiking. It's also lightweight and surprisingly comfortable.

DURASTRETCH fabrics are constructed of nylon (polyamide) with a high stretch content. They are lightweight, comfortable yet hardwearing and highly abrasion-resistant.

DURASTRETCH is available in a wide range of 2-way stretch and 4-way stretch versions. It is breathable and can be treated with a DWR finish to make it water-repellent. Most of the DURASTRETCH fabrics we use in this collection are suitable for four-season use as their inner structure quickly wicks sweat away.

DURASTRETCH fabrics make high-quality mountaineering apparel.

An extremely versatile, water-repellant, highly breathable, all-in-one solution that you can wear as next-to-skin baselayer, midlayer or weather protection shell.

BENEFITS:

- **WATER REPELLENT:** Provides high water resistance due to tightly woven fabric
- **BREATHABLE:** Highly air permeable fabric keeps you dry and comfortable when you sweat
- **STRETCHABLE:** High stretch 2-way or 4-way fabric construction provides more flexibility

A highly-breathable, durable, quick drying fabric with a high stretch content to allow you a maximum of flexibility and comfort in all your aerobic activities.

BENEFITS:

- **Breathable:** Highly air permeable fabric keeps you dry and comfortable when you sweat
- **Quick Drying:** Lightweight, fast drying fabric protects you from the wind-chill effect
- **Stretchable:** Highly stretchable 2-way or 4-way fabric construction provides more flexibility

A breathable, hard-wearing, highly abrasion-resistant fabric with a high stretch content to allow you maximum of flexibility in all movement on rock.

BENEFITS:

- **Rock Resistant:** Tear and abrasion resistant CORDURA yarn increases the durability of your product.
- **Stretchable:** Highly stretchable 2-way or 4-way fabric construction provides more flexibility.
- **Breathable:** Highly air permeable fabric keeps you dry and comfortable when you sweat.

Thermo-regulating natural wool or brushed fabric combined with a highly-abrasion-resistant, stretchable fabric keep you warm during your activities in cold and rocky terrain.

BENEFITS:

- **Warm:** A reliable and comfortable solution to protect you against cold, windy and wet conditions
- **Rock Resistant:** Tear and abrasion resistant yarn increases the durability of your product
- **Stretchable:** Highly stretchable 2-way or 4-way fabric construction provides more flexibility

An adaptable temperature regulating insulation fabric. **POLARTEC® Alpha®** is designed primarily as a highly efficient insulation layer for use with a shell in stop-and-go activities where weight and space are limited. When worn alone, they have exceptional breathability and quick dry time, for a remarkably broad comfort range. POLARTEC® Alpha® excels in back country pursuits like mountaineering, skiing, and ice climbing.

POLARTEC® Alpha® is the latest evolution of synthetic insulation offering a rare combination of lightweight warmth and true breathability in a “puffy” style garment. Because POLARTEC® Alpha® insulation is highly durable and more stable than other synthetic insulation products, more open-construction woven face and back fabrics can be selected to create an air permeable package. This small amount of airflow rapidly draws moisture away from the body and allows POLARTEC® Alpha® to be worn in a wider range of activities compared to classic “vapour barrier” style insulation.

- BENEFITS:**
- superior breathability
 - warmth without weight
 - packable
 - quick drying
 - easy-care
 - available in multiple styles and weights

POLARTEC® High Loft™ fabrics offer maximum warmth without weight, compressibility and breathability. They are the most technically advanced of the Polartec® insulation fabrics, achieving the utmost versatility and performance under extreme conditions. This level of performance is critical when all you have is what you can carry.

POLARTEC® Thermal Pro® High Loft™ fabrics are designed primarily as a highly efficient insulation layer for use with a shell in stop-and-go activities where weight and space are limited. When worn alone, they have exceptional breathability and quick drying time, for a remarkably broad comfort range. POLARTEC® Thermal Pro® High Loft™ fabrics excel in back country pursuits like mountaineering, skiing, and ice climbing.

The key to this fabric's performance is in its unique patented construction. An open-mesh stitch promotes compressibility, increases airflow, and minimizes weight. Low density, high loft pile face and back minimizes weight but increases warmth and compressibility. The fabric maintains its loft wear after wear, for enduring warmth, POLARTEC® Thermal Pro® High Loft™ fabrics are at least 30% warmer per weight than standard fleece or the most common competitive “high loft” offering. The naturally hydrophobic properties of POLARTEC® High Loft™ fleece repel moisture when exposed to the elements and speed up dry times. Reducing the absorbency of fabric ensures it remains lightweight and breathable, even in the most challenging environments and ever changing weather conditions. Open mesh stitching regulates airflow and breathability during exertion for increased comfort. This durable construction allows the fabric to retain its lofted form, even after heavy use and multiple trips through the washing machine.

- BENEFITS:**
- warmth without weight
 - highly breathable
 - packable
 - quick drying
 - versatile
 - easy-care
 - various styles + weights available

POLARTEC® Power Stretch® fabrics make moisture wicking, stretch, performance-fit base layers. Ideal for all sporting activities – from jogging to mountain climbing – where maximum freedom of movement, and clean profiles are desired. Adaptable to changing weather conditions, POLARTEC® Power Stretch® fabrics make excellent base layers and can be layered over lighter garments, or serve as warm outerwear.

POLARTEC® Power Stretch® fabrics have body-hugging 4-way stretch and are very breathable. They keep you dry when you sweat and provide warmth without weight. These are the most versatile outdoor and fitness apparel fabrics available today. Many of the fabrics feature a proprietary construction with two surfaces: a durable outer layer and a soft inner layer pulls moisture away from your skin keeping you dry, warm and comfortable. Other fabrics in the series feature compression stretch which can improve performance and reduces the chance of certain types of stop-go injuries. All the fabrics excel at handling the demands of the next-to-skin environment.

POLARTEC® Power Stretch® has the ability to retain warmth without restricting movement or agility during activities. The outer surface has a low-friction finish that reduces irritation when worn with other fabrics and increases overall abrasion resistance. The next-to-skin layer stays dry, breathable and comfortable by continuously transferring moisture vapour for rapid evaporation. This versatility provides flexible support and warmth for reliable comfort in any fitness based activity. POLARTEC® Power Stretch® wicks moisture like a base material, but can handle direct exposure to the elements when necessary.

- BENEFITS:**
- resilient stretch
 - wicks moisture
 - highly breathable
 - easy-care
 - available in multiple styles and weights

Enhanced lightweight, moisture wicking, next-to-skin base layer fabrics. **POLARTEC® Power Grid™** fabrics are highly breathable, and make ideal base layers for all sports, either as base layers or technical mid layers.

POLARTEC® Power Grid™ fabrics are designed to keep your skin dry when you sweat. All fabrics in the series feature a bi-component knit construction that uses different yarns on either side of the fabric. This creates two different surfaces: one that is optimized to move moisture away from the skin, the other to dry quickly. Superior moisture management plus the patented Power Grid™ construction ensures that athletes get the most bang from their caloric buck. These fabrics weigh less, take up less pack space, and deliver more insulation and breathability than most fabrics in their class.

Grid construction:
The raised fabric pillars on the inside create touch points for moisture pick up off the skin. The open air channels between those pillars ensure that the fabric delivers the highest levels of breathability, compressibility, and the highest warmth per fabric weight. POLARTEC® Power Grid™ fabrics deliver performance in the cleanest way possible, by leaving out what you don't need.

- BENEFITS:**
- superior wicking action
 - grid channels reduce weight & increase warmth
 - quick drying
 - highly breathable
 - lightweight
 - easy-care

POLAR LITE

POLARLITE is SALEWA's proprietary fleece. It reflects our long-standing experience with and enthusiasm for this lightweight, quick-drying insulation fabric.

POLARLITE comes in various weights and with different characteristics: stretch, microfibre, body-mapping, printed fleece. It covers all bases when it comes to mountain sports. We design our POLARLITE garments with specific activities in mind. POLARLITE is warm, lightweight and comfortably soft. It's ideal for insulating outer layers or mid layers and can even be worn next to the skin. POLARLITE textiles are compressible, quick drying; breathable and easy-care, which makes them ideal for mountain sports.

- BENEFITS:**
- warm
 - lightweight
 - abrasion-resistant
 - soft
 - packable
 - quick drying
 - easy-care

DRYTON

DRY'TON is SALEWA's proprietary, easy-care, durable and resistant synthetic fabric with a natural feel.

DRY'TON is extremely functional. It is designed to transport moisture rapidly away from the body to evaporate efficiently. Moisture on the skin is quickly removed. This protects the wearer from overheating during physical activity and from overchilling during rest breaks or once activity has ceased. It is available in a range of different fibres, blends and constructions, including with UV protection. We use it to make base layers, mid layers and pants, shorts and linings among other things.

- BENEFITS:**
- breathable
 - easy-care
 - lightweight and comfortable
 - durable
 - natural feel
 - extremely functional moisture management properties
 - quick drying
 - many versions bluesign® certified
 - high UV protection options available

POLAR LITE ACTIVE

POLARLITE ACTIVE
An especially breathable, lightweight, fast drying fabric that offers reliable heat retention for all mountain activities.

- BENEFITS:**
- Breathable: Air permeable fabric keeps you dry and comfortable when you sweat
 - Quick Drying: Lightweight, fast drying fabric protects you from the wind-chill effect
 - Warm: Reliable and comfortable warmth to weight ratio protects you against cold, windy and wet conditions

POLAR LITE WARM

Highly warmth to weight ratio guarantees good insulation to retain your core body warmth, but fabric also supports transfer of sweat away from your body to avoid overcooling during mountain activities.

- BENEFITS:**
- Warm: Reliable and comfortable warmth to weight ratio protects you against cold, windy and wet conditions.
 - Breathable: Air permeable fabric keeps you dry and comfortable when you sweat.
 - Quick Drying: Lightweight, fast drying fabric protects you from the wind-chill effect.

DRYTON ICONIC

High-Performance synthetic fabrics quickly and reliably transport sweat away from your body to prevent you from overcooling, dry fast and protect you from UV Radiation.

- BENEFITS:**
- Breathable: Air permeable fabric keeps you dry and comfortable when you sweat
 - Quick Drying: Lightweight, fast drying fabric protects you from the wind-chill effect
 - UV Protection: Reliable anti-UV finish protects your skin from the sun during activity

DRYTON ACTIVE

DRYTON ACTIVE® cotton is a functional blend of 85 % polyester and 15 % cotton. It is an eco-friendly solution that keeps the wearer cool, dry, fresh and comfortable in high-performance base layers, hiking or mountaineering apparel.

Mixed cotton fabrics are an ecofriendly solution that feel soft and natural on the skin and reliably transport sweat away from your body to prevent overcooling.

- BENEFITS:**
- Breathable: Air permeable fabric keeps you dry and comfortable when you sweat
 - Quick Drying: Lightweight, fast-drying fabric protects you from the wind-chill effect
 - Natural: No chemicals for a natural next-to-skin feel

SIZING CHARTS

All of our fits are developed considering our body measurement chart and the end use of the garment within a layering system.

- ATHLETIC FIT:** sporty ergonomic fit with freedom of movement for the intended activity
- REGULAR FIT:** normal fit – comfortable, slightly ergonomic with freedom of movement
- SLIM FIT: SLIM FIT** – closer to the body fit than our regular fit
- RELAXED FIT:** relaxed fit – looser fit than regular fit
