# VIA FERRATA

## EN:958: 2017

### 01 | USER WEIGHT

Particularly for lighter people acceleration forces that occur in case of a fall into a via ferrata set can be very high. The new EN standard 958:2017 guarantees a lower braking force for lightweight people: The allowed user weight now starts at 40kg (total weight without equipment) instead of 50kg.

### 02 | MAX BRAKING FORCE

While the old standard set the general braking force to maximum 6kN, now for people weighting 40kg the maximum breaking force has been reduced to 3.5kN, an equivalent of 350kg. For a person weighing 120 kg, the maximum braking force has to stay within the previous 6kN.

### 03 | MAXIMUM BREAKING LENGTH

With the new standard, the braking length of the energy absorber has been increased from 1,2m to 2,2m. This elongation is necessary in order to assure lower braking force.

### 04 | OTHER CHANGES

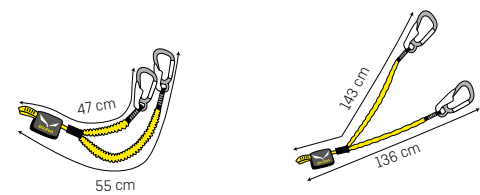

The initiation force required to release the absorber has been raised by 10kg to 130kg. Further, for the first time, a wet test and obligatory cycle test have to be performed. Previous Salewa sets already had to pass internal cycle testing.

### 0968 ERGO ZIP

The latest version of our tried-and-tested via ferrata set. With ergonomic ERGOTEC 2.0 carabiners, shock absorber and improved, new-design roller mechanism.

# KEY FEATURES POLES

## 01 | CARBONIUM CONCEPT

Carbon poles have a number of advantages over aluminium poles. They are lighter, significantly stiffer and have a longer lifespan as they don't corrode. However, carbon is more brittle and can break easier, for example after impact loading. This is why the SALEWA CARBONIUM SERIES poles have a hybrid construction. The top sections of the poles are made of carbon. The bottom section has the most contact with rocks and ledges and is subjected to greater bending and loading so it's made from a stronger metal (high-strength aluminium such as Titanal). This gives them the required robustness for alpine use.

## 02 | ADJUSTMENT

The Powerlock-System that features on the SALEWA CARBONIUM SERIES poles in two different versions locks reliably and is easy to use. And it allows quick and easy height adjustment for a perfect fit. The high-strength aluminium version lock mechanism on the Carbonium Ascent has the additional advantage that it functions in fluctuating temperatures.

## 03 | GRIP

The SALEWA CARBONIUM SERIES grips are designed specifically for different activities. By carefully combining different materials, the grips on the Carbonium Ascent and Carbonium Tour ensure that the pole fits comfortably in the hand in every position. If the user shifts their grip position, the ergonomic design prevents it from slipping while the EVA foam is pleasant to the touch. Smoother material at the knob prevents blisters. The Carbonium Alp Speed grip is extra-long to enable rapid grip changing, for example when running on mountain ascents and descents. Its comfortable EVA foam prevents slipping. The extended grip zone with G-Reptile grip tape on the Carbonium Ascent makes it easier to change grip position at virtually no extra weight.

## 2626 CARBONIUM ASCENT

Robust and reliable pole for mountaineering use in all terrain, including extreme conditions .

### FEATURES:

- 3-piece telescopic pole made of carbon; bottom section is made from high-strength aluminium to cope with rocks and scree

# BACKPACKS

## CARRYING SYSTEMS

### **FIT IS THE MOST IMPORTANT FEATURE OF A BACKPACK.**

Backpacks are somewhat like full suspension systems. They must react to every move you make.

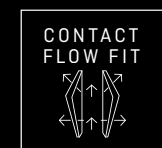

#### **CONTACT-FIT**

Less pack movement thanks to the way it sits closer on your back.

#### **CONTACT FIT LITE**

Lightweight carrying system with a snug fit that adapts to your back for reduced pack movement and good ventilation.

#### **CONTACT FLOW FIT**

Excellent load control and outstanding ventilation with enhanced airflow to keep your back as dry as possible.

#### **AIR-FIT**

Superior ventilation due to improved airflow between user and backpack.

#### **CUSTOM FIT**

Easy-adjust carrying system for an individualised fit.

#### **CUSTOM FIT PRO**

Easy-adjust carrying system for an individualised fit in men's and women's specific versions.

#### **EASY-FIT**

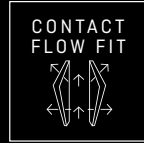

Comfortable fit due to smart use of padding.

# BACKPACKS

## MOUNTAINEERING

### CONTACT FLOW FIT CARRYING SYSTEM

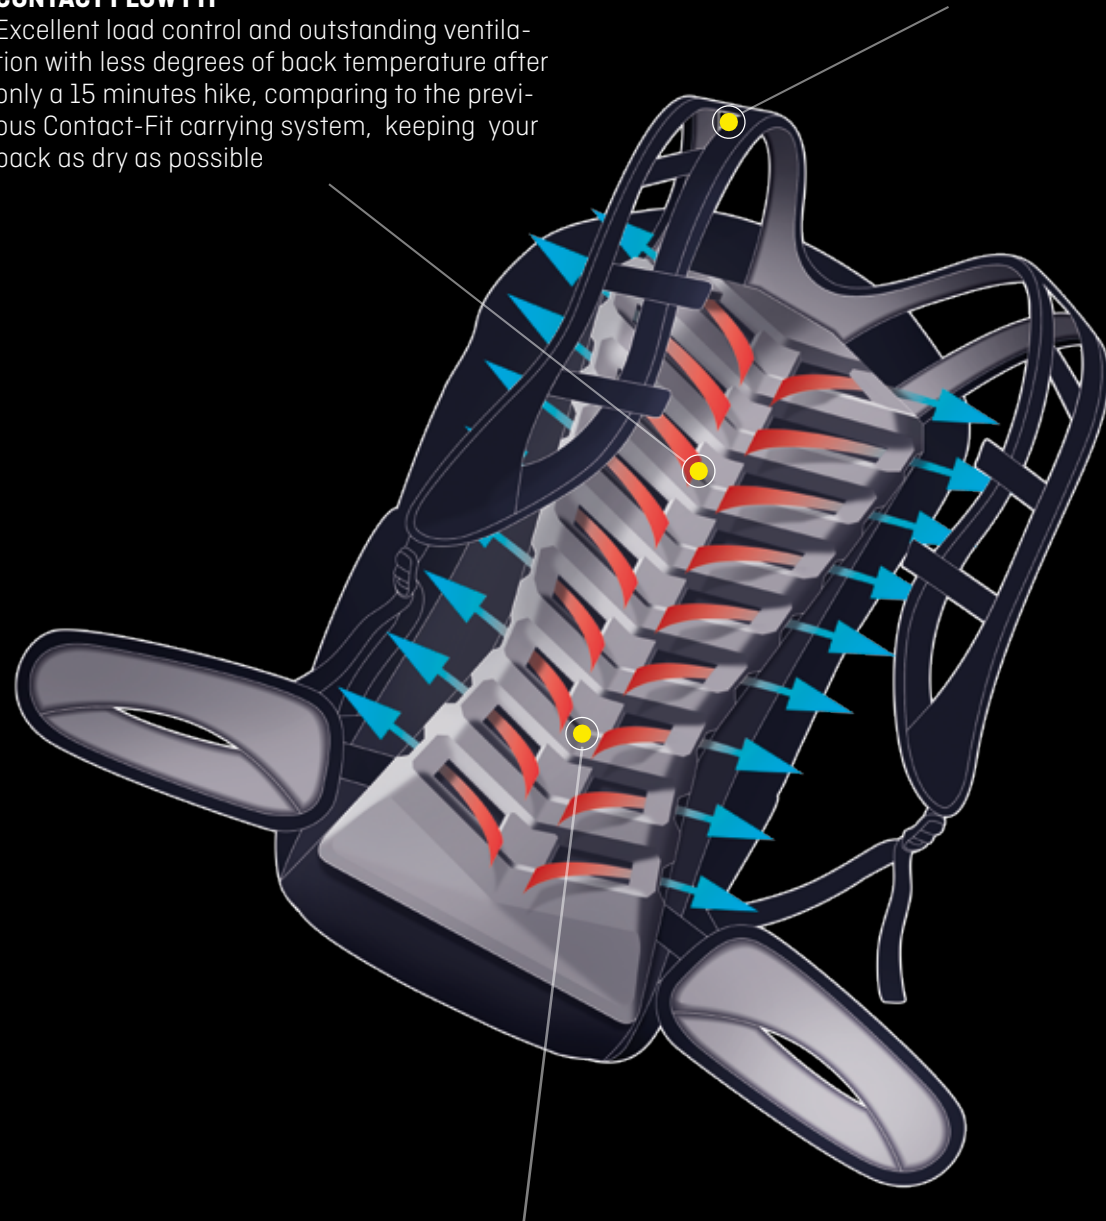

#### CONTACT FLOW FIT

Excellent load control and outstanding ventilation with less degrees of back temperature after only a 15 minutes hike, comparing to the previous Contact-Fit carrying system, keeping your back as dry as possible

#### SPLIT SHOULDER STRAP

Lightweight, split shoulder straps for comfort and breathability

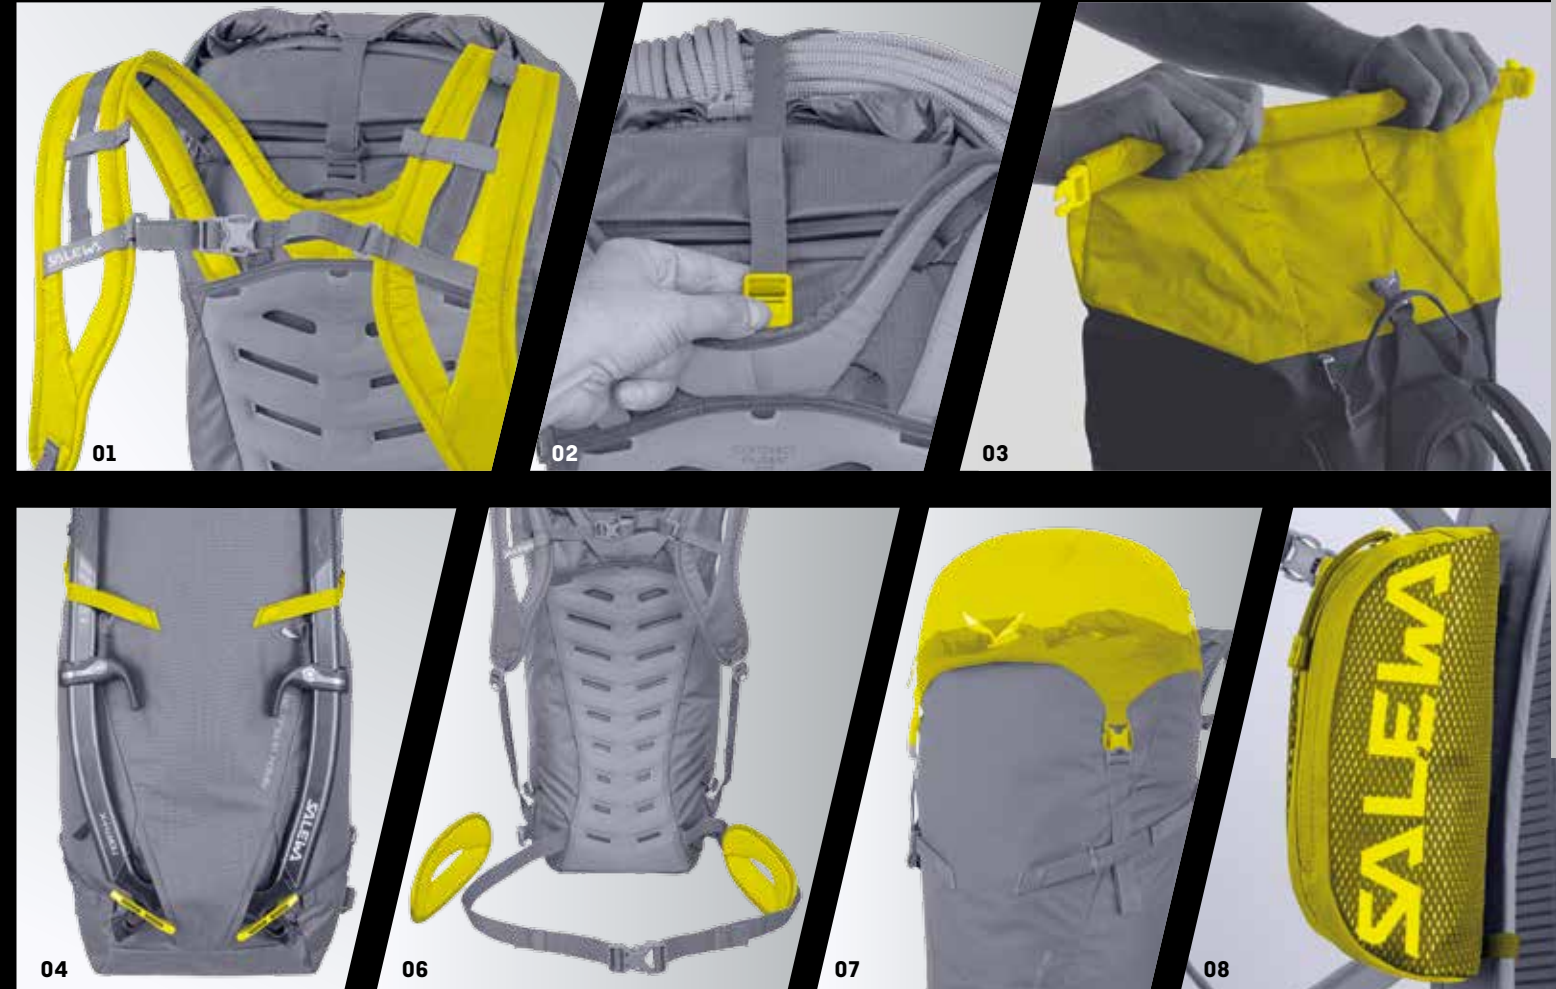

#### EVA PADS WITH 3D CHANNEL VENTILATION

3D channels in the foam pads permit air to flow freely over the back without compromising load control

### CONTACT FLOW FIT CARRYING SYSTEM

#### CONTACT FLOW FIT

Excellent load control and outstanding ventilation with 1,6 degrees less of back temperature after only a 15 minutes hike, comparing to the previous Contact-Fit carrying system, keeping your back as dry as possible

#### EVA PADS WITH 3D CHANNEL VENTILATION

3D channels in the foam pads permit air to flow freely over the back without compromising load control

#### SPLIT SHOULDER STRAP

Lightweight, split shoulder straps for comfort and breathability

### AIR-FIT 2.0 CARRYING SYSTEM

#### AIR FIT 2.0

Minimal body contact (with 26% less contact area\*) and breathable materials enhance air-flow for maximum ventilation. This significantly reduces the temperature between the body and pack by 1,5 degrees already after 15 minutes of hike. Designed to allow full mobility.

\*compared to previous Air Fit carrying system

#### SPLIT SHOULDER STRAP

Lightweight, split shoulder straps for comfort and breathability

#### SPLIT BACK CONSTRUCTION

Improved breathability due to 26% less body contact area compared to conventional suspended carrying systems.
